                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated nucleic acid molecules ADB91065-
ADB91843. Also disclosed is a recombinant vector comprising a
DB91843. Also disclosed is a recombinant vector comprising of
the invention and a recombinant host cell comprising
colynucleotide of the invention, and a recombinant host cell comprising
the recombinant vector. The polypeptide of the invention is useful in
dentifying a binding partner by contacting the polypeptide with a
chinding partner, and determining whether the binding partner increases or
decreases activity of the polypeptide. The polypeptide, polynucleotide,
antibody or its fragment, agonist or antagonist are useful for preparing
a pharmaceutical composition for diagnosing or treating diabetes or
conditions related to diabetes. The present sequence is that of the human
immunoglobulin Fc portion used to generate fusion proteins, increasing
the stability of the fused protein as compared to the secreted protein
only. Note: The sequence data for this patent did not form part of the
printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acid encoding a human secreted protein is useful in diagnosing or treating diabetes or conditions related to diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   75 CATGTGAAAATAAGTTGCTCTCTGGACTGGTTGATGGTCTCAGTTATCCCAGTTGCAGAA 134

The Inventor.

If the inventor.

If a major of the polymentation to the polymentation of the polymentation in the inventor.

Con its partial peptide, an antibody binding to the polymentle or peptide or the polymentation of the encoded protein, and observing the binding to between the two, a transformant carrying the polymentation of the encoded protein, and observing the binding to between the two, a transformant carrying the polymentation as a propertion of substitution of the intense polymentation. The oligomentation as a primer for synthesising the polymelectide, or as a probe to substitute of proteins are useful as pharmaceutical agents and many disease-related proteins are useful as pharmaceutical agents and many disease-related proteins are useful as plantamaceutical agents and activity, or as targets of genes may be included in their expression and activity, or as targets of genes may be included in their expression and activity, or as targets of gene therapy. The genes are involved in tissue and/or cell cregeneration. Membrane proteins, signal transduction-related proteins, cregeneration. Membrane proteins, signal transduction-related proteins are encoding them can be used as indicators for diseases (e.g. osteoporosis, encoding them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The contrivity or expression of the invention. Note: Some of the sequence contrivity or expression of the invention. Note: Some of the sequence contribution such represented in the printed specification, but is based on sequence information supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                              Otsuki T, Wakamatsu A, Sato H, Ishii S;

The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ36911) encoding polypeptides (ABP75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuronuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity. The polynucleotides are useful for constructing or expanding chromosome maps
                                                                                                 471

The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          polynucleotides and polypeptides, useful for treating heavy city, cancer, inflammatory diseases, immune disorders, and the lar, CNS, cardiovascular or gastrointestinal effects of the

potentially secreted proteins. The nucleic acids and the polypeptides of they encode may be used in the prevention, treatment and disgnosis of diseases associated with inappropriate GENSET gene expression. For example, they be used to treat disorders associated with decreased GENSET gene expression by rectifying mutations or deletions in a patient's genome that affect the activity of GENSET or by supplementing the patients own production of GENSET polypeptides. Conversely, antisense nucleic acid molecules may be administered to down regulate GENSET expression by binding with the cells' own genes and preventing their expression. The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and hence to determine which patients may be in need of restorative therapy. The GENSET polypeptides and be used as antigens in the production of antibodies and in assays to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   identify modulators (agonists and antagonists) of GENSET polypeptide expression and activity. The present sequence is a GENSET nucleic acid of the invention

This invention relates to novel polynucleotides encoding human secreted proteins. Specifically, it refers to the vectors, host cells, recombinant and synthetic methods for producing human polynucleotides, polypeptides and antibodies. Furthermore, it relates to screening methods to identify agonists and antagonists that can be used to inhibit or enhance the production of the secreted proteins. The present invention describes these compositions as useful for diagnosing, treating or production and function of the secreted proteins. The present invention describes these compositions as useful for diagnosing, treating or preventing disorders such as cancer, haematopoletic diseases including prostatitis and inguinal hermia, musculoskeletal diseases including systemic lupus erythematosus and goutt, cardiovascular disease including systemic lupus erythematosus and goutt, cardiovascular disease including arrhythmia and hypernatraemia, mixed fetal diseases including fetal arrhythmia and hypernatraemia, mixed fetal diseases including curinary incontinence and renal disorders, neural or sensory disease including and papersent and socupational lung disease, and docrine diseases including contal hypertension and irritable bowel syndrome and connective tissue or including diseases including scleroderma and epidermolysis bullosa. As such, there are various activites such as cytostatic, antianemic, antianemic, antiathmatic, antiathmatica
irritable bowel syndrome, epithelial disease, scleroderma; epidermolysts bullosa; cytostatic, antiament; antiartritic; antiathratic; antiathmatic; anti-HIV; immunosuppressive; antiathmatic; anti-HIV; immunosuppressive; antiinflammatory; antipsociatic; antibacterial; osteopathic; dermatological; antigout; immunomodulator; antiatrhythmic; cardiant; nocepopic; notabathic; neuroprotective; antiparkinsonian; tranquilizer; antidiabetic; anabolic; hypertensive; vulnerary; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acids and polypeptides, useful for diagnosing, treating, preventing or ameliorating diseases or disorders e.g. cancer, anemia, arthritis, asthma, inflammatory bowel disease or Alzheimer's

dermatological, antigout, immunomodulator, antiarrhythmic, cardiant, nootropic, antilipemic, nephrotropic, uropathic, neuroprotective, antiparkinsonian, tranquilizer, antidiabetic, anabolic, hypertensive an vulnerary. This polynucleotide is a DNA fragment of a BAC clone that encodes a human secreted protein of the invention. NOTE: This sequence does not appear in the printed specification but has been obtained in electronic format from the US patent office at the following web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              124 AGAAATCTGTATATATTTGCGGATGAATTACATCTGGGAATGGGCTGCCCTGCAAATCGG

```
polypeptide, and polynuclectide sequences that encode it. The GSSP3
polypeptide reduces circulating blood glucose levels, increases insulin
sensitivity, and/or reduces body mass. The GSSP3 polypeptide and
polynucleotide sequences are useful in serum glucose regulation, fatty
acid metabolism, body weight loss, and prevention of body weight gain.
Compositions comprising GSSP3 polypeptides are useful for controlling
blood glucose levels, for treating metabolic-related diseases or
disorders (e.g. obesity, impaired glucose tolerance, insulin resistance,
blood glucose levels, for treating metabolic-related diseases or
disorders (e.g. obesity, impaired glucose tolerance, insulin resistance,
byperlipidaemias, atherosclerosis, heart disease, hypertension, stroke,
syndrome C, type I or II diabetes, diabetes related complications,
microangiopathy, neuropathy, neuropathy, nephropathy, polycystic ovarian
syndrome, ocular lesions, microangiopathic lesions, or syndromes such as
canthosts nigricans, leprechaunism and lipoatrophy). The polypeptides
are also useful to improve physical performance during work or exercise,
and to treat dyslexia, attention-deficit disorder, attention-
deficit/hyperactivity disorder, and psychiatric disorders such as
controlling and proceed thuman GSSP3 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5564 ATACATACATATGTATATGAGTTTATATATATCTTGTTCGTGATTGTGGCATCAGGACAAGG 5623

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              in invention leaders to primers for synthesising full length count of and and molecules encoding a human protein have been isolated been determined. Primers for synthesising the full length cDNA are useful for clarifying the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is the nucleotide sequence of the 5'-end of a cDNA provided in the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EDO
                                                                                                                                                           830 Primers useful for synthesizing full length cDNA clones and their use in genetic manipulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           307 rággacrgargárccrccrccccrcrcccrrrrcagccggrrcaggagaagrccaarga 366
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             68 AAATAAGTIGCICTCIGGACTGGITGATGGTCTCAGTTATCCCAGTIGCAGAAAGCAGAA 127
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   367 crefecrerectatade crestrander carestadas de contra de carectadas de como d

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 19, Sequence 2, Al Sequence 16, Sequence 16, Sequence 27,

Sequence 147319, Application US/10301480
Publication No. US20060057564A1
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Wang, David G.
TITLE OF INVENTION: Identifiction and Mapping of Single Nucleotide Polymorphisms
TITLE OF INVENTION: in the Human Genome
TITLE OF INVENTION: in the Human Genome
TITLE OF INVENTION UNMER: US/10/301,480
CURRENT APPLICATION NUMBER: US/10/301,480
CURRENT APPLICATION NUMBER: US 10/215,598
PRIOR FILING DATE: 2002-08-09
PRIOR FILING DATE: 2002-08-09
PRIOR FILING DATE: 2001-08-10
NUMBER OF SEQ ID NOS: 1226818
SOFTWARE: FastSEQ for Windows Version 4.0

Publication No. US20060057564A1

GENERAL INFORMATION:

APPLICANT: Wang, David G.

TITLE OF INVENTION: Identifiction and Mapping of Single Nucleotide Polymorphisms:

TITLE OF INVENTION: In the Human Genome

FILE REFERENCE: 108827.137

CURRENT APPLICATION NUMBER: US/10/301,480

CURRENT APPLICATION NUMBER: US 10/215,598

FRIOR FILING DATE: 2002-08-09

FRIOR FILING DATE: 2001-08-10

NUMBER OF SEQ ID NOS: 1226818

SOFTWARE: FastESQ for Windows Version 4.0
